

“I’m investing in
the future with bio”

100% future

Green farmlands

Good for your body

bio

Deliciously pure

Animal friendly

Deliciously pure

Vegetables from **open fields**, animals with the **freedom** to go outside, bread that's been given the time to rise. Biological products are **pure** and full of **flavour**. They stand out for their quality and authenticity. And you can taste it!

Good for your body

Biological products are the fruit of a **careful process** which starts with a fertile soil or a healthy animal. And care is taken on every step of the way. Biological farming results in products with **a high nutritional value**.

Green farmlands

Bio farming is free of artificial fertilisers, pesticides and GMOs. The farmers use **crop rotation, organic fertilisation and biological control** to keep their lands pure and fertile. The ideal medium for strong and resilient cereals, healthy fruit and vegetables and a variety of fauna and flora.

Animal friendly

Biological animals are free to go outside, live on a nutritious diet of **biological feeds** and are given time to grow in stables with natural lighting. Biological livestock holders choose their breeds with care, to keep the use of medicines to a minimum. The animals thrive in these conditions.

100% future

Food production is a worldwide system which affects the natural world, the environment, the climate and the lives of farmers here and in the southern hemisphere. **Bio aims to ensure a future for all, across the globe.**

vegetable produce

animal produce

processing

Vegetable produce (vegetables & fruits)

The soil takes centre stage:
crop rotation and organic
fertilisation

Preventive crop protection,
adapted breeds, no synthetic
pesticides

Genetic diversity, no GMOs

Pursuit of closed loop
agriculture

Animal produce

Land oriented: avoidance of over grazing and fertilisation

Spacious, open and naturally lit stables

All animals are free to go outside

Biological feeds

Preventive healthcare: strong breeds, healthy feeds, species specific behaviour, often out in the open air

Processing

Purest possible products

Strict legislation: small number of permitted additives and preservatives

No genetically modified ingredients

No irradiation, no nanotechnology

Where can I buy it?
